URBAN MOBILITY

RECHARGED

Smart City Mobility

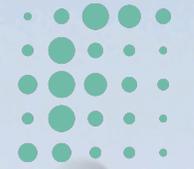

too
far to walk
too **short**
to drive

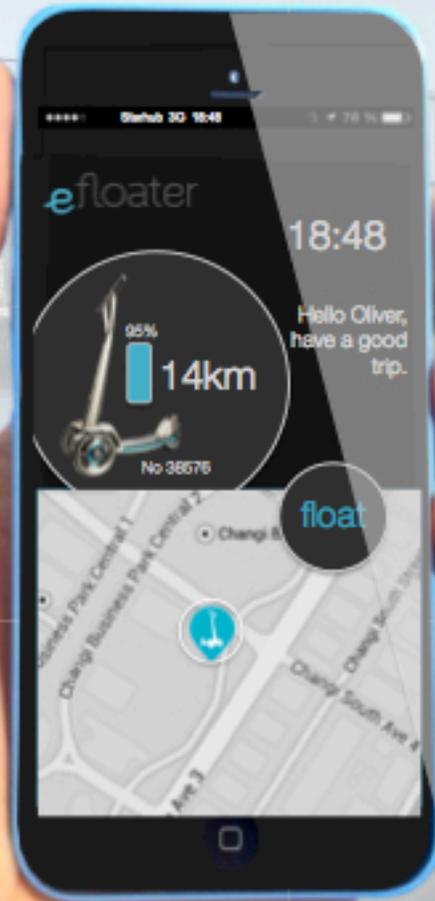

solving the last mile problem

URBAN MOBILITY INNOVATION

NEXT GENERATION SHORT DISTANCE SHARING TECHNOLOGY

floatility

fleet management platform business

e-mobility on demand

pay per use

free floating

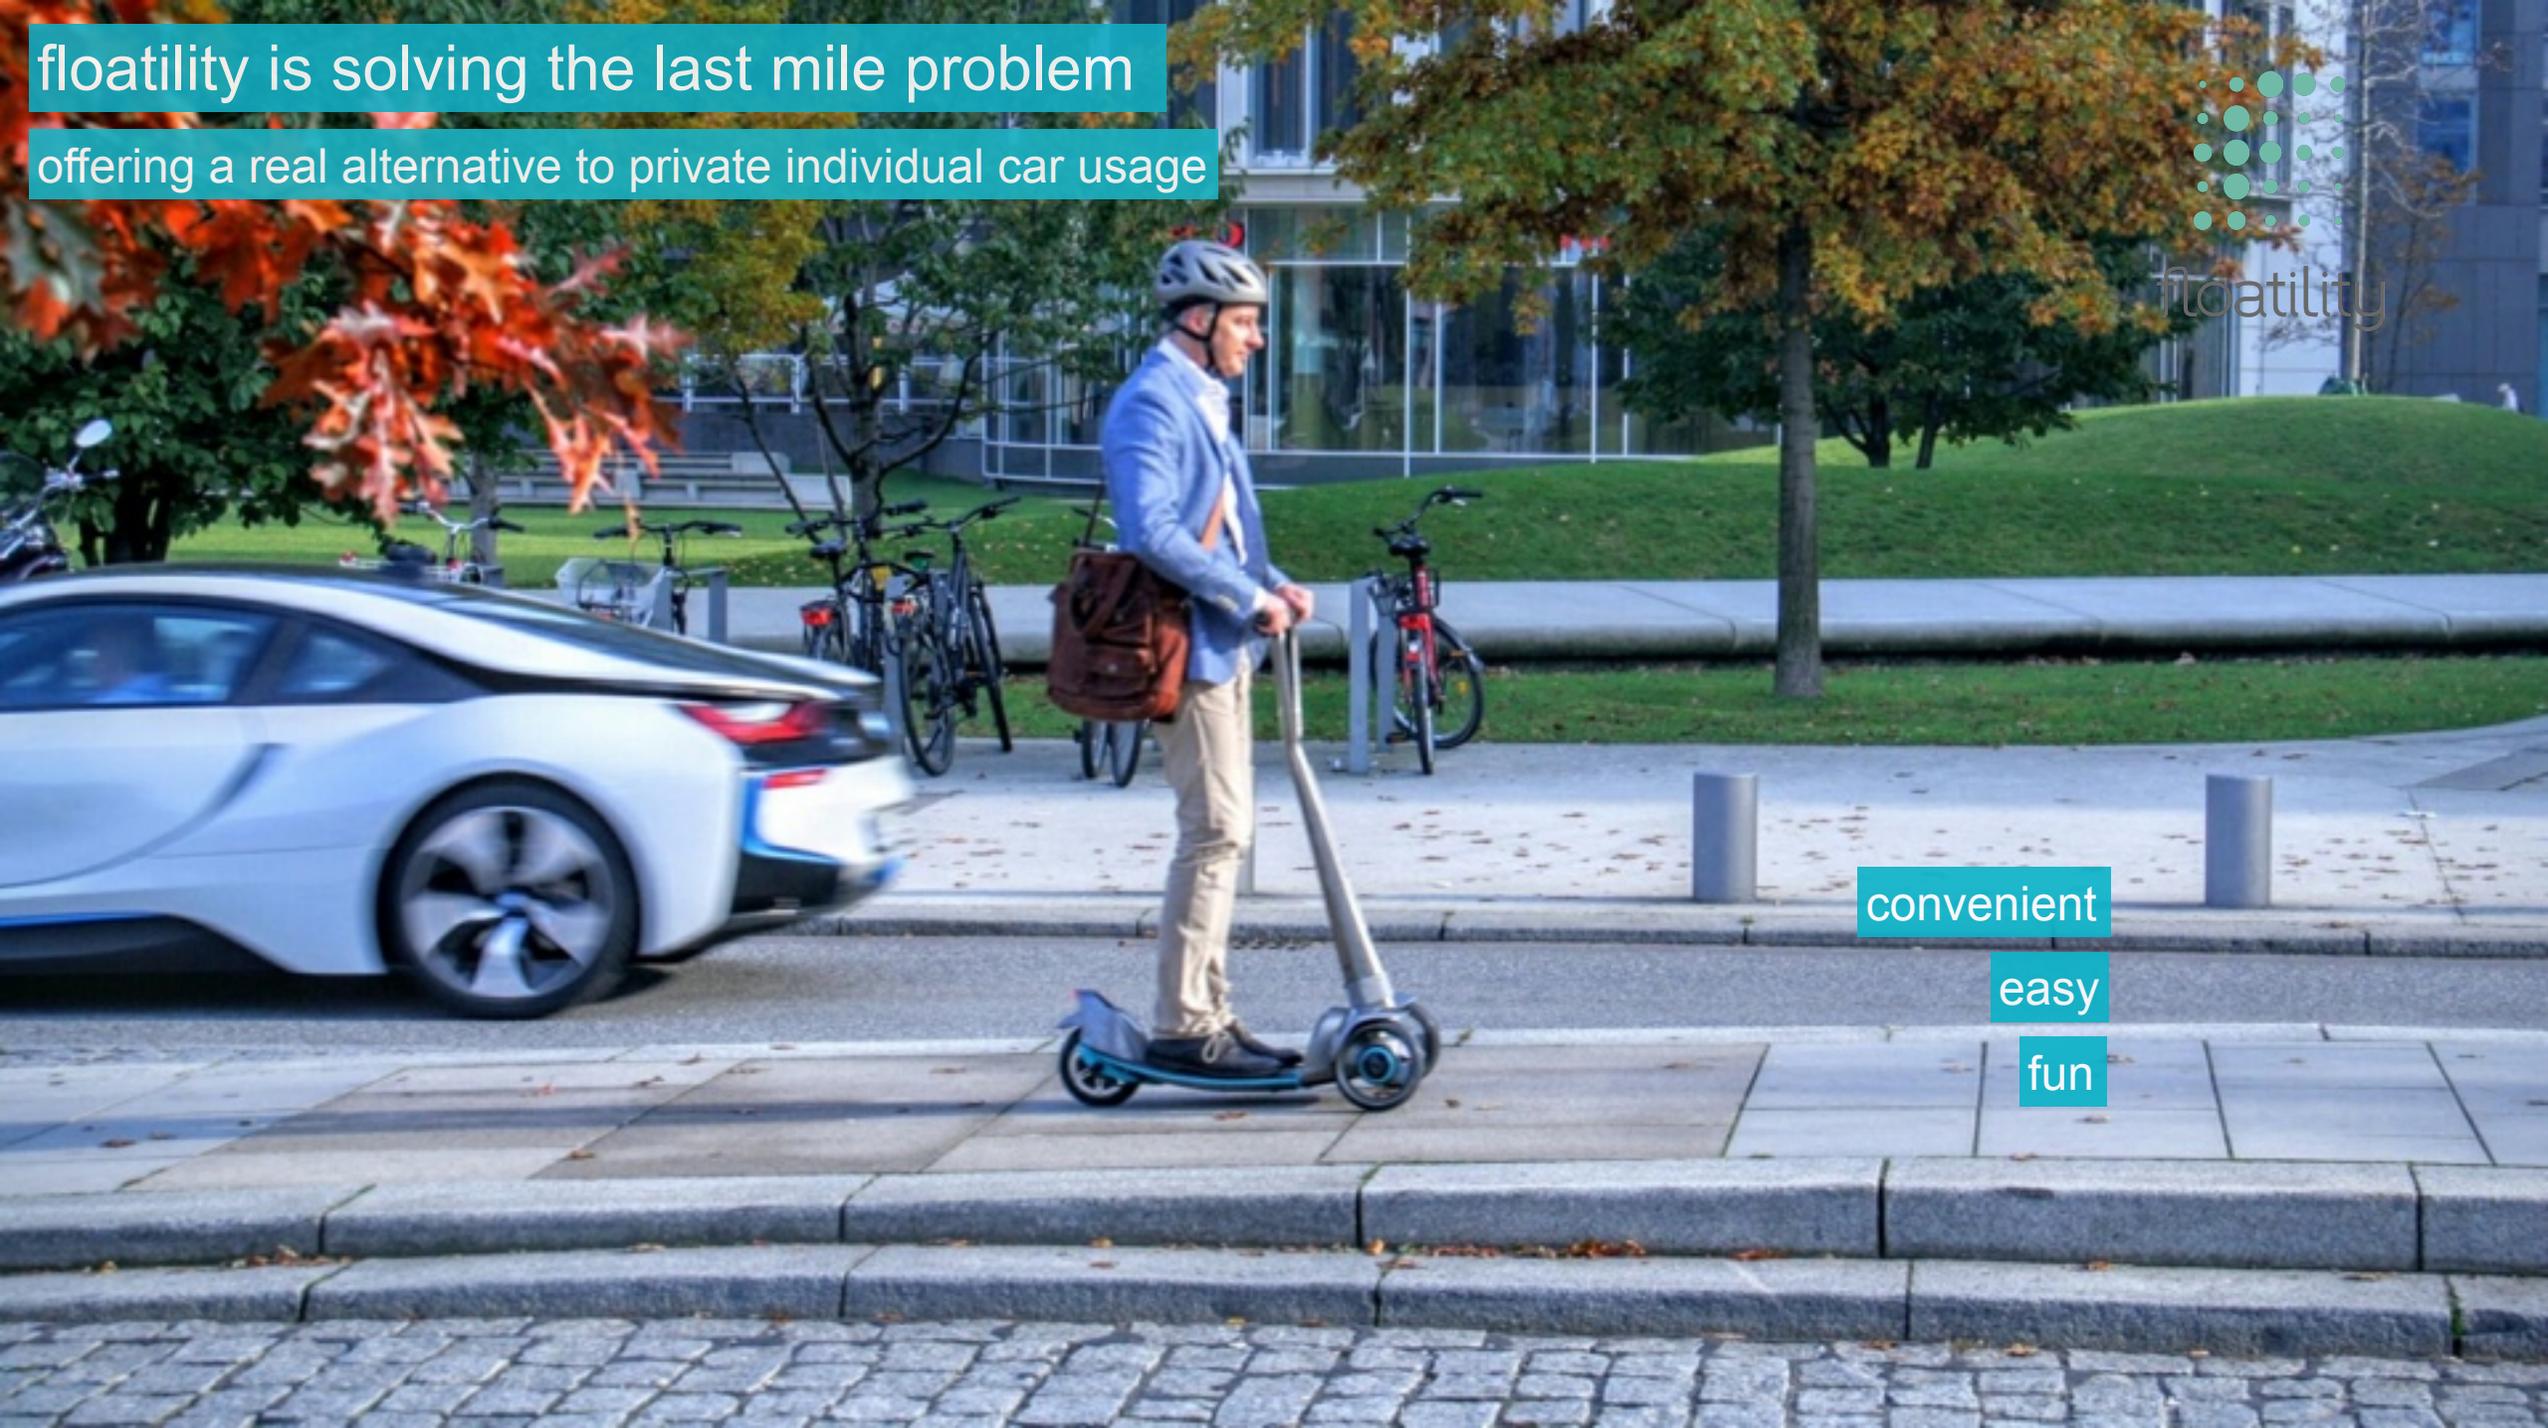

Internet of Things / big data

floatility is solving the last mile problem

offering a real alternative to private individual car usage

floatility

convenient

easy

fun

proprietary system design

in cooperation with international development partners

>80% of advanced ultra lightweight composites => low weight

robust with three wheels, two brakes and lights => stable and safe

integration of vehicle telematics => IoT platform intelligence

integration of sensor technology => big data generation

optimised for efficient network operation => low operating cost

floating is like carving when you ski => fun to ride

e-floater

floatility

floatility is solving the last mile problem

mobility at your fingertips

next generation urban mobility

pick-up where you see, drop-off where you want

real-time network information + IoT + sensors + data

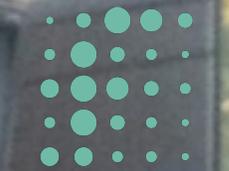

floatility

value-add for network operators: 24/7 real-time network analytics

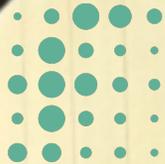

next generation urban mobility
